About me

I am in my third year of biomedical engineering at MIT Manipal. I spent a month in the MRI department of a diagnostic centre, and since then I have been building things on my own: a wearable that detects falls, and a hospital management system now running at a clinic in my home town. I am looking for an internship in medical devices, imaging or embedded systems.

Education

Manipal Institute of Technology, Manipal — Jul 2024 to 2028 (expected)
B.Tech in Biomedical Engineering, currently in third year

Stepping Stones High School, Aurangabad — 2022
CBSE, Class 10, Grade A+

Internship

MRI Department Intern, Sahyadri Diagnostic Centre, Aurangabad — Jun to Jul 2026
One month in a centre with a 3 Tesla MRI, a 384 slice CT, X-ray, ultrasound and CBCT

- Learned the main parts of an MRI system: the magnet, the gradient coils and the RF coils, and followed the patient workflow from screening through to the scan.
- Learned MR safety rules, metal screening, quality checks and maintenance, and helped with scans under the staff's supervision.

Projects

GuardianBand, a wearable fall detection band — Apr 2026 to present
Arduino UNO, MPU-6050 sensor, SIM900A GSM. Detection logic complete, hardware build in progress

- A band for elderly people living alone. If the wearer falls and does not get up, it sends an SMS to a family member.
- It checks four things together before alerting: a sudden drop, a hard impact, a change in body angle and no movement after the fall. A buzzer sounds first so the wearer can cancel a false alarm.

Hospital management system for National Clinic, Aurangabad — Apr 2026 to present
React, TypeScript, Express, MongoDB. Deployed at national-clinic-hms.onrender.com

- Software for a real clinic to replace its paper files: patients, OPD appointments, pharmacy, lab reports, inpatient beds and billing.
- Separate logins for the admin, doctors and staff, and every change is written to a log that cannot be edited.

Momentum, a planning app — Aug 2026 to present
HTML, CSS, JavaScript. Works offline and installs on a phone. Live at abdulhaq7378-hash.github.io/momentum

- A daily planner with tasks, habits, a focus timer, goals and expenses. I drew all the charts myself in SVG.

Ferea Coffee House, a cafe website — Sep 2026
React, Vite, Tailwind CSS. Live at abdulhaq7378-hash.github.io/ferea-coffee

- A sample website I built to show local cafes what their own site could look like. Made for phones first.

Certifications and competitions

Matrix Computation and its Applications, NPTEL, IIT Madras. 96%, Gold, top 1% of 364 certified — Oct 2026

Advanced Engineering Mathematics, NPTEL, IIT Kharagpur. 91%, Elite + Gold, top 1% of 815 certified — Apr 2026

Introduction to Electrical Engineering, NPTEL, IIT Madras. 75%, Elite + Silver — Apr 2026

Deep Learning in MATLAB for Image Applications, MathWorks learning path, four courses — Oct 2026

Atellica Solution training, Siemens Healthineers Academy, four modules — Nov 2026

Bharatiya Antariksh Hackathon, ISRO and Hack2skill. Took part and submitted an idea — 2026

Positions of responsibility

IE Aerospace, MIT Manipal — 2024 to present
Working committee in first year, moved up to the management committee in second year. I help run the club's events.

Skills

Medical and lab	MRI fundamentals, MRI safety, imaging workflow, biomedical instruments, quality checks
Electronics	Arduino, MPU-6050 and other sensors, GSM modules, basic circuits
Programming	C, Python, JavaScript, TypeScript, React, MATLAB, deep learning for image applications, Git and GitHub
Languages	English, Hindi, Urdu, and Marathi (spoken)
